PV 'SmartHeater' Panel with Wi-Fi

PV 'SmartHeater' Panel with Wi-Fi

Our PV SmartHeaters have built in Wi-Fi and advanced technology that can be controlled via an app from your mobile phone or PC.

With the app, you can control the heaters whilst away from your property. Via the internet, you can program the temperature in each room for all days of the week. You can also turn them off and on, access and implement child safety features, or turn on the frost setting if you are going to be away for longer periods.

The SmartHeaters can of course be used manually and without the need to access an app.

ALL Heaters are EU ECO DESIGN and LOT 20 Compliant.

ALL Heaters carry a NEMKO approval.

5 Years Warranty

Nemko-approved

Childproof

Frost Protection

From Norway

Double insulated

Technical Information
